

# RM 80

## Heavy Linkage Offset Disc Cultivating Plough

**Value, strength and experience – when you add it up it's got to be Gibbins Rawling.**

Gibbins Rawling have been making ploughs since 1878 - over 100 years of experience! The RM 80 offset disc cultivating plough is designed for extremely tough conditions. It is similar to the RM 75 with the main difference being in the greater number of bearings and shorter axles in the disc gang assemblies. When you study its features and price you'll see why it is the best value disc plough on the market.

- Great digging ability - ideal for primary and secondary tillage using 75 HP to 165 HP tractors.
- Single pressure screw can be adjusted to transfer weight to the rear of the cultivator, resulting in even disc penetration. Option of fixed or floating position.
- Easy gang adjustment for the perfect level finish.
- Solid cast spools individually machined to suit the disc for extra strength.
- Triple sealed bearings.
- 230mm (9") disc spacing.
- Fitted with 610mm x 5mm (24" x 3/16"), 610mm x 6mm (24" x 1/4") or 660mm x 6mm (26" x 1/4") scalloped discs.
- Weight where it counts - in the gang - not ballast on the frame (which adds load to the bearings) like most other machines.
- 40mm square high tensile gang bolts.
- Jack and prong type scrapers are standard equipment - formed scrapers available on request.
- Fully adjustable drawbar.
- Fitted with flotation type tyres.
- Optional extras (at additional cost) - ram and hoses for machine lift.

	20 Plate	24 Plate	28 Plate	32 Plate
Approx. weight	1700 Kg	1970 Kg	2190 Kg	2510 Kg
No. Bearings	8	12	12	16
Cutting width	2.3m (7'6")	2.74m (9')	3.2m (10'6")	3.66m (12')
